

October 25th, 2021

Notice to Employer: informed consent and the “Right to Know”

To whom it may concern:

On October 14th, 2021, I was informed by the Canada Post Corporation of their intentions to enforce a mandatory Covid-19 vaccination practice for all employee. Needless to say, as a former Health and Safety Officer and now currently as Human Resources Business Partner, I have been greatly concerned watching my employer over the last year and a half, enact safety measures that run contrary to everything that I have been educated on and have experienced regarding occupational health and safety. I have raised these concerns to several co-workers and leaders within Canada Post but was unsuccessful in receiving any responses to my queries.

Through my tenure at Canada Post, I have experienced and partaken in just about every safety process imaginable. I know what is required of the employer to conceptualize, consult, test, verify and implement all safety procedures or processes that Canada Post chooses to advance to their employee base. In the past, I have witnessed Canada Post attain success, but at the same time also fail in their attempt to implement a new safety protocol. In my opinion this recently announced vaccination mandate now seems to be the culmination of several concerning actions by the corporation that do not meet the already established occupational health and safety as well as federal/international human rights legislation. As this is increasingly a cause for concern for me as well as many of my peers, I am hoping that I can use my experience and knowledge to educate and assist Canada Post in understanding how and why these mistakes have occurred by initiating this formal process.

The very foundation and subsequent legislation of federal occupational health and safety has **always** been attained by a collaboration of differing voices speaking to a safety concern. It has **not** been established federally or internationally by a singular entity. It has been established by years of rigorous research and debate between the employer, employee, joint health and safety committees as well as through the inclusion of multiple global experts providing their knowledge and insight. And make no mistake about it, health and safety would not stand where it is today without employers relying on the best practices of industry giants. An immediate example of this would be Canada Post’s reliance on Dupont as a mentor for their safety management system; many aspects in fact borrowed directly from the Dupont method.

In the past Canada Post always made its best efforts to ensure that their employer obligations under Section 2 of the Canada Labour Code were met, however; with the creation of their vaccination practice, all I have heard is, “We are deferring to the public health authority for guidance.” While I can appreciate Canada Post’s position, I do not believe that the mandates or beliefs from an external public health official, fulfill all of the **Employer’s Responsibilities** under section 2 of the Canada Labour Code or with the associated regulations that accompany the code.

To date, Canada Post has implemented safety measures under the guidance the Public Health Authority of Canada to alter their physical environment for which they care for. These measures have included social distancing, personal protective equipment like safety masks, hand sanitizers, reduced employee access, barriers

and safety shields, all of which I thought were completely unnecessary as the options provided were not designed for the safety purpose intended, but nonetheless were **allowable** options for the employer to try in their attempt to mitigate the apparent risk: an aerosolized virus. A virus almost identical in safety profile when compared to the influenza virus, and apparently far less severe than the first SARS virus that hit Canada in 2003, neither of which required these safety measures.

I felt that these measures were not only complicated and confusing, but completely useless as a means to protect against an airborne contaminant, especially one far smaller than asbestos particulates – think about the specialized PPE those workers wear during abatement. And as Canada Post had never reacted to any other aerosolized coronaviruses that circulated through our environments in the past, I also felt it strange that if Canada Post now believed this virus to be as deadly as their safety measures dictated, that they would allow their employees to keep working in congested facilities given the risk of exposure to what everyone was calling a deadly and fatal airborne virus. As a historical example, if asbestos was even assumed to be circulating in the air in one of our locations, or mold, or mouse droppings, the facility would immediately be shut down for testing and the employees would be sent home until the environment could be deemed safe by a qualified professional.

Fast forward to today, and there seems to be an incredibly huge disconnect, as Canada Post has now taken what was previously their responsibility under the Canada Labour Code, and has altered said responsibility into what seems to be, the entitlement and ownership of their employees' physical body. This notion is very troubling to me and needs to be rectified, as the employer does not have this entitlement and has not fulfilled the Employer's Responsibilities listed under section 2 of the Canada Labour Code to propose their vaccination practice.

What Canada Post needs to concern themselves over at this point due to their recent vaccination mandate, is the **absolute safety of the vaccines** that they are mandating their employees to now take. Perhaps it is unbeknownst to the employer that once they removed the voluntary option for an employee to make their own personal decision as to whether or not they were going to be vaccinated - based on informed consent with their physician - that they inadvertently had taken the ownership and responsibility of ensuring that the vaccines were not a danger to their employees, and that all studies and relative research had been examined.

This could also have further legal ramifications for any management or safety representative at Canada Post, as Workers Compensation Alberta has announced the following recently:

If a worker has an adverse reaction to a COVID-19 vaccination, they are entitled to compensation when the immunization is a mandatory condition of employment: "When immunization is required for the prevention of a work-related disease or infection and as a result of a reaction to this compulsory immunization a worker experiences a loss of earnings, WCB will consider the reaction and its consequences to be compensable."

A WCB claim would be legal evidence that could tie specific individuals to a potential workplace fatality or severe adverse event based on previously publicized corporate statements, or other forms of verbal and non-verbal communication that would suggest an employee take a vaccine. If you throw on top of that the fact that the corporation is forcing this mandate without performing their due diligence under section 2 of the Labour Code, a legal defense starts to run pretty thin in front of a courtroom. And as one of the go to sources for safety information and consultation at Canada Post, I certainly will not adopt the risk of an employee being potentially killed because I told them to take an experimental vaccine on behalf of the corporation, nor do I wish to have future criminal charges brought against me for gross negligence resulting in death.

Ryan Orydzuk
Human Resources Business Partner
12135-149st T5L-5H2

My goal here is to help, and I sincerely hope that at the end of this line of questioning that I am providing you under my Right to Know, that Canada Post safety representatives take a good hard look at the information provided and ask themselves this:

After considering the math, science, statistics, and the attached testimonies from world renowned doctors and scientists, can I personally guarantee that out of 65,000 – 70,000 employees, I will not severely injure or potentially kill some of those employees with the “safety practice” I just implemented?

A Canada Post employee is protected already by constituted federal occupational health and safety law (Canada Labour Code – CLC), and as such I do have several health and safety rights that can be utilized to gain an understanding from my employer regarding any of their workplace practices or procedures that they wish for me to undertake.

These rights are very commonly known in the workplace, and are also promoted frequently by each provincial Worker’s Compensation Board. These rights are:

1. The Right to Know
2. The Right to Participate
3. The Right to Refuse

It is under these employee rights that the following information and subsequent line of questioning has been formulated.

Under the **Right to Know**, and as quoted using the federal government’s own wording (Workplace Safety - Canada.ca):

You have the right to be informed of known or foreseeable hazards in the workplace and to be provided with the information, instructions, training, and supervision necessary to protect your health and safety.

The Code requires the use of appropriate methods of communication for all employees including those with special needs. Such methods are Braille, large print, audiotapes, sign language, and oral communication.

In addition, you are given the right to have access to government or employer reports related to the health and safety of employees through your policy health and safety committee, workplace health and safety committee or health and safety representative.

Under the **Right to Participate**, the following definition applies:

As health and safety representatives or workplace health and safety committee or policy health and safety committee members, employees have the right to participate in identifying and correcting work-related health and safety concerns.

Employers with 300 or more employees are required to establish a policy health and safety committee. The purpose of the committee is to handle issues that are organization-wide in nature.

Part II of the Code also provides for employee participation through the use of an internal complaint resolution process.

And finally, under the **Right to Refuse**, the final definition applies:

You have the right to refuse to work if you have reasonable cause to believe that:

- *Your workplace presents a danger to you*
- *The use or operation of a machine or apparatus presents a danger to you or to another employee, and*
- *The performance of an activity constitutes a danger to you or to another employee*

Further to these known employee rights, under **section 124** of the Canada Labour Code:

Every employer shall ensure that the health and safety at work of every person employed by the employer is protected.

For my line of questioning I have also included the following definition of danger proposed by our federal government under section 2 of the Canada Labour Code, and have also included the Interpretive Guidelines (IPG) that further elaborates on the definition.

Subsection 122(1) of the Code defines "danger" as:

"any hazard, condition or activity that could reasonably be expected to be an imminent or serious threat to the life or health of a person exposed to it before the hazard or condition can be corrected or the activity altered."

[Definition of Danger - 905-1-IPG-062 - Canada.ca](#)

The Right to Know is a crucial necessity for any employee, as it not only equips the employee with the necessary education about any safety concerns, but also visually educates the employee about the practical physical process and any identified safety concerns related to the process as a means to protect themselves from danger. It is by this very process that a bond of trust can be built between the employee and the employer, as it can be assumed that if a full and transparent Right to Know process has been undertaken by the employer, then proper and informed consent can then be provided to the employee.

Since Canada Post has now taken what was previously a private medical decision between the employee and their physician, in an attempt to transform this into their own workplace safety policy/practice, the employer is **now obligated** to provide their employees **all necessary** safety information as part of the informed consent or Right to Know process.

Further complicating this arbitrary decision by Canada Post, is that the new policy/practice is now attempting to coerce the employee into taking one of these vaccines by defining the matter as necessary for employment due to occupational health and safety requirements.

The Canada Labour Code is quite extensive in the detailing of the Employer's requirements for any policy or practice that is to be used as a workplace safety mandate, and as defined under Section 122 of the Canada Labour Code, I am providing the following a list of questions as a basis for submitting my Right to Know safety concerns to my Employer. I do expect these questions to be answered by the corporation completely and to my satisfaction as defined within section 122 of the CLC.

Questions for the employer:

1. Aside from Susan Margles, can Canada Post please specify which individuals are directly responsible for the creation and approval of their recently announced vaccination practice? Specific names and positions within the corporation are requested please. **Canada Post Corporation is responsible for the development of its Vaccination Practice.**
2. Was Canada Post's vaccination practice solely created by Canada Post employees or were any other external influences included in the creation of the practice? **Canada Post in consultation with its National Policy Committees and Unions. Canada Post created its vaccination practice to align to the Government of Canada requirement to have the federal workforce fully vaccinated. From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada.**
3. Does Canada Post believe that their proposed list of vaccines create immunity against the disease called covid-19? **Not our vaccines but those approved for use in Canada by Health Canada**

9. Does Canada Post consider the spike protein mechanism of the virus known as SARS-CoV-2 as a danger to their employees? **We refer to experts at Health Canada**

[Viruses | Free Full-Text | SARS–CoV–2 Spike Impairs DNA Damage Repair and Inhibits V\(D\)J Recombination In Vitro \(mdpi.com\)](https://www.mdpi.com/1999-4903/12/11/1999)

10. Out of the proposed vaccinations suggested by Canada Post for their employees to take as per their vaccination practice, which vaccine does Canada Post feel has the best vaccine safety profile to avoid any complications or adverse events related to taking a covid-19 vaccination? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

11. Can Canada Post provide me the research they used to make this vaccine selection as per question 7? **See answer above.**

12. Does Canada Post believe that the SARS-CoV-2/Covid-19 vaccines that they are mandating their employees to take are safe, when compared against the federal occupational health and safety definition of danger? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccines approved by Health Canada.**
-

[COVID-19 vaccine safety: Weekly report on side effects following immunization - Canada.ca](#)

13. Does Canada Post feel that their vaccination practice may have adverse effects on one or more of their employees based on the current adverse related injury statistics provided by the Canadian government? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

[COVID-19 vaccine safety: Weekly report on side effects following immunization - Canada.ca](#)

14. Does Canada Post consider Myocarditis or Pericarditis a serious medical condition? **Would refer to Health Canada experts.**

[Clinical Considerations: Myocarditis after mRNA COVID-19 Vaccines | CDC](#)

[Myocarditis \(nih.gov\)](#)

15. Has Canada Post measured by a risk assessment, the likelihood of any airborne exposure to SARS-CoV2, for any employee inside a Canada Post facility? **Canada Post has implemented workplace controls to support the prevention of the spread of the Covid-19.**
16. Has Canada Post measured by risk assessment, the likelihood of any airborne exposure to SARS-CoV-2, for any employee outside of a Canada Post facility? **Canada Post has implemented workplace controls to support the prevention of the spread of the Covid-19.**
17. Can these risk assessments be provided to me? **Canada Post has implemented workplace controls to support the prevention of the spread of the Covid-19.**
18. Is Canada Post aware that the injections that they are demanding their employees to take – Pfizer BioNTech, Moderna, Astra Zeneca and Johnson & Johnson are currently listed in the National Library of Medicine under ClinicalTrials.gov as experimental, and that these injections are not scheduled for completion until 2023 and beyond? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

Example: [Study to Describe the Safety, Tolerability, Immunogenicity, and Efficacy of RNA Vaccine Candidates Against COVID-19 in Healthy Individuals - Full Text View - ClinicalTrials.gov](#)
(Phase 3 – Pfizer)

42. Is Canada Post aware that there have been more recorded deaths pertaining to the covid-19 since their availability was made to the public, than with all other recorded vaccines in history since the records have been kept? (See last page) **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**
 43. What proof can Canada Post provide me to demonstrate that they have followed their obligation under the Right To Participate, wherein they have canvassed or requested any feedback regarding a potential vaccination safety, plans or policies for those employees that are MGT Exempt? **As provided in answering these questions and our formal response to your hazard report and refusal. We are following the process outlined in the CLC Part II section 128.**
 44. As Canada Post is undertaking the role of the physician by forcing vaccination mandates on their employees, what information are they compiling as a means to fulfill their requirement to provide informed consent to their employees? (Adverse effects lists, medical studies, ongoing employee statistics around vaccination adverse events, employee testimonies, etc?) **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**
 45. Can Canada Post please provide me with the statistics regarding how many employees have been confirmed positive for covid since the corporation implemented testing as a part of their quarantine process? Please break this information down by total case counts per month and week. **Do not understand question. Canada Post followed the guidance of the Public Health Agencies of Canada with respect to quarantine periods.**
 46. Can Canada Post also provide the statistical difference between the employees that were confirmed positive and negative as part of the required testing when sent home to quarantine? **I don't believe this statistical information has been determined**
-

47. Is Canada Post aware that the creator of the MRNA vaccines, Dr. Robert Malone, has clearly stated that these MRNA vaccines should never ever be taken, as they are a danger to the host? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

[mRNA vaccine inventor speaks out on 'Tucker' after YouTube deletes video of him discussing risks | Fox News](#)

48. Is Canada Post aware of the Great Barrington Declaration (860,000 signatures), The Rome Declaration (12,000 leading global doctors), and the World Doctors Alliance, all of which are organizations that have declared the Covid-19 measures and vaccines a crime against humanity? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

50. Does Canada Post know what the leading virus variant is in North America? **Suggest checking Health Canada website as they are the experts.**

51. Does Canada Post know that the injections they are proposing do not immunize in anyway against the Delta variant? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

[does-the-covid-vaccine-prevent-infection-pdf.pdf \(mercola.com\)](#)

52. Is Canada Post aware that the current overall mortality rate across all age groups for covid-19 in Canada, as per the Government of Canada's Health InfoBase on October 27th, 2021, is 99.983% **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

[COVID-19 daily epidemiology update - Canada.ca](#)

53. Is Canada Post aware that the regular seasonal flus like Influenza A, and Influenza B, have carried a similar mortality rate and ven higher mortality rate that estimated with Covid-19? **Suggest checking Health Canada website as they are the experts.**

Influenza total mortality rate 2019/2020 = 99.996%
Influenza total mortality rate 2020/2021 = 99.995%

[COVID-19 daily epidemiology update - Canada.ca](#)

54. Is Canada Post aware that an individual has a greater chance surviving covid with less chance of injury based on the federal government's own statistics, than they do of suffering an adverse effect including possible death after taking the injection? **Suggest checking Health Canada website as they are the experts.**

Survivability = 99.983
Chance of adverse effect = 0.043%

55. When using the listed adverse event rate of 0.043%, available on the Government of Canada's covid-19 vaccine adverse event tracking system, and compare the ratio of the total doses of the vaccine vs the

Canada Post employee base of approximately 55,000 – 65,000 employees, the following adverse event total Canada Post employee population range groups appear:

55,000 x 0.00043 = 24 or more severely injured employees

65,000 x 0.00043 = 28 or more severely injured employees

These statistics include deaths and other severe adverse effects, however; these statistics do not include the possibility of 3rd or 4th vaccine “booster shot” nor does it take into account the large percentage of possible underreporting that can occur with the adverse events, all which will dramatically increase the total amount of employees injured or killed due to a SAFETY PRACTICE

56. Based on this simple risk analysis against their own population base, how can Canada Post claim that they will not injure or severely harm one of their employees? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

[COVID-19 daily epidemiology update - Canada.ca](#)

57. Given the statistical breakdown of question 56, can Canada Post provide to me their work processes or safety practices that **will** likely and knowingly injure their employees outright simply by participating in said process or practice? **CPC is committed to providing a safe and healthy workplace for all employees. From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada**
58. Is Canada Post aware that the government of Canada has declared that there were virtually no cases of Influenza during the 2020-2021 season? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada**

[Annual influenza reports - Canada.ca](#)

59. Can Canada Post provide their research or data that confirms the safety of used mixed vaccine types or brands as listed within their vaccination practice? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

[COVID-19 daily epidemiology update - Canada.ca](#)

(As these vaccines use new technology and proprietary ingredients from separate manufacturers, and that were only created due to the Covid-19 disease, how can anyone be certain of how the chemicals and properties included can interact with one another?)

60. Can Canada Post provide any national minutes or recorded safety discussions with any of their bargaining agencies regarding the safety profiles of the vaccines that they are proposing? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada. Policy Committee minutes are available on**
-

the MISMIH website. All Policy Committees were consulted in the development of our Vaccine Practice.

61. Is Canada Post planning on including the demand for a 3rd, 4th, 5th or 6th vaccine” as part of their future vaccination practice? **Current vaccination practice states a fully vaccinated requirement which currently are the full doze of those vaccines approved by Health Canada.**

[melatonin-health-benefits-pdf.pdf \(mercola.com\)](#)

[do-vitamin-d-supplements-help-prevent-respiratory-tract-infections-pdf.pdf \(mercola.com\)](#)

82. Is Canada Post aware that by ensuring sufficient vitamin D levels in their employees would reduce the potential hospitalization rate due to Covid-19 by 80%? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada**
83. Is Canada Post aware that their vaccination policy cannot be turned off or removed like personal protective equipment after the employee has worked their 8 hours, meaning that after an employee has worked 8 hours to go home for the day, they cannot take this vaccination out of their body while on their own time. Has Canada Post devised a method to remove the vaccination from the employee's body when they are on their personal time? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**
84. Is Canada Post aware that health organizations like the CDC and WHO have had to change their definitions of vaccination, pandemic and vaccine adverse event, due to the current statistics around covid-19 breakthrough vaccination cases as well as the original definition's inability to qualify the government's/employer's reactions to any of the current events we are witnessing regarding Covid-19? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

85. What safety training or information has Canada Post provided to their team leaders that are acting as management representatives pertaining to health and safety, that assists the supervisor in the potential diagnosis of an injury due to vaccination? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada. CPC Team Leaders would be informed by employees or their medical practitioner/WCB and the process similar for other workplace injuries would be followed if applicable. All team leaders receive training on Incident Management.**
86. What safety training or information has Canada Post provided to their employees for recognizing or reporting of a potential vaccination injury should the employee feel that they have had an injury due to their employer's mandate? **CPC employees would inform their team leader or their medical practitioner/WCB of such an injury and the process similar for other workplace injuries would be followed if applicable.**
87. Given the complicated safety protocols of both storing and administering the Covid-19 vaccinations, which are carried out by an external third party (local pharmacy or doctor), has Canada Post implemented measures to audit and ensure said pharmacies and doctors are following the standard safety procedures as a means to protect their employees? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**
88. Can Canada Post provide the contracts and communications related to question 80? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**
89. Is Canada Post aware that the very testing method known as the RT-PCR Polymerase Chain Reaction test that drove the very notion that everyone was contracting and dying from Covid-19, has been recalled globally by the CDC due to their inability to diagnose Covid-19? (This recall occurs at the end of 2021) **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada and those vaccinees approved by Health Canada.**

[Lab Alert: Changes to CDC RT-PCR for SARS-CoV-2 Testing](#)

[CDC: PCR tests are recalled as unreliable - Athens News \(rua.gr\)](#)

90. Is Canada Post admitting that all of the safety measures that they implemented before the vaccines were made available, have not worked whatsoever to prevent the spread of Covid-19? If Canada Post is not conceding that is the case, then why are all measures left in place even after employees have taken their suggested vaccinations? **From the start of the pandemic, Canada Post has stated that it follows the guidance from the Public Health Agencies of Canada.**

In closing, I would like to add that should Canada Post assume that they are somehow removed from the Employer Responsibilities within section 2 of the Canada Labour Code, I would simply point them to the fact

that since Workers Compensation will be adjudicating suspected cases of vaccination injury as a workplace incident, the employer is **automatically** bound to their obligations within section 2 of the Canada Labour code. The employer will need to serve Worker's Compensation with the Employer's Statement in contrast to the employee's claims provided on the Employee's Statement. It will be through this very adjudication that the employer will be held liable for ensuring that their employees have been provided all of the necessary information and training regarding the work practice that placed them in danger. To date Canada Post has done nothing to understand the safety profiles of their proposed vaccines, and they have not committed to any research nor have they afforded any external opinions on the matter.

I will also add that it is the Internal Complaint Resolution Process (ICRP) that drives all employee concerns around occupational health and safety in Canada. This is not a foreign process, nor is it a process that the employer can wipe their hands of by simply stating that we are taking guidance from the Public Health Authority of Canada. It is through this very process that the employer is defined as a separate entity from the neutral governing body (ESDC), who in turn will make a determination on the hazard contestation between the employee and employer. This process also will provide insight as to whether or not the employer has fulfilled their Employer Responsibilities.

[Internal complaint resolution process - Canada.ca](https://www.canada.ca/en/employment-social-development/services/complaint-resolution-process.html)

Should the employer not respond adequately by providing the necessary information to justify their position for the safety process they are implementing, or choose to try and defer to another party without proving their due diligence under the Employer's Response, they would automatically be considered negligent in managing the so-called safety practice they were implementing.

If the employer did actually perform their due diligence regarding the safety and efficacy of the vaccines they are forcing their employees to take, then they would not have concerns with employee work refusals, vaccine efficacy questions, vaccine adverse event questions, vaccine attestations, education or informed consent regarding the very safety practice that is being implemented....

But that isn't what is happening now is it?

With Canada Post set to place 15,000 employees on leave Without Pay on August 26th, 2021, due to non-compliance regarding their vaccination policy, Canada Post will be officially dealing with their biggest work refusal on record. Make no mistake about it, the corporation can call it a "non-compliant vaccine status", but it actually is a **15,000 person work refusal**. This is unheard of at Canada Post and for me personally, if I was responsible for 15,000 employees and they said, "We have a safety concern with your vaccination practice", I would take heed, because with that many people making that very claim, there is likely **something wrong with the safety practice you have written.**

(This informed consent letter does not confirm my personal vaccination status, nor does it confirm any religious or ideological beliefs. These are safety concerns based on medical studies, journals and other relevant sources. Please see the attached hazard form highlighting the basic concerns with the Employer's vaccination practice)

Hazard Report

Rapport de condition dangereuse

A - Hazards - Deficiencies		Dangers - défauts	
Location EMPP	Endroit	Date Year: 2021, M: 11, D: 22	Time Heure

Description of hazard: The listed hazards of concern are the vaccinations that the Canada Post Corporation has chosen as a means to enforce their vaccination practice. The vaccinations may constitute a potential danger given the federal government's definition of danger for all Canada Post employees that are forced to take the vaccine as per the Canada Post mandate.

Supervisor actions to address hazard justification below. Actions du superviseur pour adresser la condition dangereuse ou justification ci-dessous.
